

## Summer Math Activities

- Put 10-20 small objects, such as beans, coins or pasta in a paper bag. Have your child reach in and grab a few objects with one hand, and then with the other. First count the objects in the left hand and then add the number of objects from the right hand by counting on.
- Ask your child to help sort the laundry. Sort the laundry into lights, darks, and whites. They can also sort by shirts, shorts, socks or by color.
- Give your child an addition problem with two numbers smaller than 10, such as  $4 + 5$ . Then give a related addition problem using the numbers in a different order ( $5 + 4$ ). Have your child solve the problem using counters or a number line. Ask your child to create some problems on their own.
- Have your child measure the length of three different objects using paper clips, pencils, or other same-size objects. Ask which is longer?, Which is shorter?

## Books to Read:

### Books to Read:
